

Quando la bobina è eccitata, l'otturatore si solleva e fa sì che da 2 a 1 ci sia passaggio libero, in questo modo da 1 a 2 il flusso è molto ristretto. Quando la bobina è diseccitata, la SVCP agisce come valvola di ritegno che consente il flusso libero da 1 a 2, mentre lo blocca da 2-1. When the coil is energized the poppets lifts and opens the 2 to 1 flow path. In this operation mode, flow from 1 to 2 is severely restricted. When the coil is de-energized, the SVCP acts as check valve allowing free flow from 1 to 2, while blocking from 2 to 1.
